

**KABARAK**

**UNIVERSITY**

**EXAMINATIONS**

**2008/2009 ACADEMIC YEAR**

**FOR THE DEGREE OF BACHELOR OF EDUCATION  
SCIENCE**

**COURSE CODE: CHEM 321**

**COURSE TITLE: CO-ORDINATION CHEMISTRY**

**STREAM: SESSION VI**

**DAY: FRIDAY**

**TIME: 2.00-4.00 P.M.**

**DATE: 28/11/2008**

---

**INSTRUCTIONS:**

**Answer ALL questions in sections**

**PLEASE TURN OVER**

1. (a) Write the electron configuration of the following atoms;  
 (i) Sc (ii) Co (iii) Cu (iv) Zn  
 [Atomic numbers; Sc = 21, Co = 27, Cu = 29 and Zn = 30] [4 marks]  
 (b) Briefly explain why Zn is not considered as transition elements. [1 mark]  
 (c) Draw diagram of the five *d*-orbitals indicating clearly the distribution of their electron densities with respect to x, y and z – axes. [2.5 marks]
2. (a) Explain the main postulates of Werner's theory of co-ordination compounds.[4 marks]  
 (b) Study the table below showing properties of Cobalt ammonate chlorides and answer the questions that follow;

Compound	Number of Particles determined by cryoscopic measurements	Molar conductance $\Lambda_m$ Ohm <sup>-1</sup> cm <sup>2</sup>
CoCl <sub>3</sub> .6NH <sub>3</sub>	4	390
CoCl <sub>3</sub> .5NH <sub>3</sub>	3	262
CoCl <sub>3</sub> .4NH <sub>3</sub>	2	102
CoCl <sub>3</sub> .3NH <sub>3</sub>	1	0

- (i) Account for the above experimental observation using Werner's theory of co-ordination compounds [4 marks]  
 (ii) Calculate the E.A.N of cobalt in the compound above  
 [Atomic number of Co = 27] [1 mark]
3. (a) Write short notes on the following terms as applied in co-ordination chemistry;  
 (i) Hard acids (ii) Spectrochemical series (iii) Back-bonding [6 marks]  
 (b) Give the I.U.P.A.C names of the following compounds:  
 (i) [Co(en)<sub>2</sub>Cl(NO<sub>2</sub>)Cl] (ii) [Cu(NH<sub>3</sub>)<sub>4</sub>][PtBr<sub>4</sub>] (iii) K[PtNH<sub>3</sub>Cl<sub>5</sub>]  
 (iv) [Zn(NH<sub>3</sub>)<sub>4</sub>]SO<sub>4</sub> (v) [(NH<sub>3</sub>)<sub>4</sub>Co(NH<sub>3</sub>)<sub>4</sub>]NO<sub>3</sub> [5 marks]  
 (c) Draw the structures of the following ligands and indicate clearly the donor atoms;  
 (i) Trien (ii)EDTA (iii) peroxy (iv) thiocynato [4 marks]

(d) Distinguish between;

(i) chelating and bridging ligands (ii) ambidentate and polydentate ligands.

[4 marks]

4. a) Using examples, discuss the following types of isomerism in co-ordination compounds;

(i) co-ordination position isomerism (ii) geometric isomerism (iii) ligand Isomerism

[6 marks]

(b) **State and explain** three factors that determine the magnitude of crystal field splitting in co-ordination compounds.

[6 marks]

5. (a) The complex  $[\text{Fe}(\text{CN})_6]^{3-}$  is paramagnetic with one unpaired electron. Account for the bonding in this complex using the following bonds theories.

[Atomic number of Fe = 26]

(i) Valence bond theory

(ii) Crystal field theory

(iii) Molecular orbital theory

[10 marks]

(b) State two advantages and two disadvantages of the molecular orbital theory over crystal field theory .

[4 marks]

(c) Account for the following observations;

(i)  $[\text{Ti}(\text{H}_2\text{O})_6]^{3+}$  is coloured but  $[\text{Sc}(\text{H}_2\text{O})_6]^{3+}$  is not.

(ii)  $[\text{MnF}_6]^{4-}$  has a perfect octahedral geometry while  $[\text{CoF}_6]^{4-}$  is tetragonal

(iii) Transition elements form complexes

[Atomic number; Sc = 21, Ti = 22, Co = 27 and Mn = 25]

[9 marks]
