

**KABARAK**

**UNIVERSITY**

**UNIVERSITY EXAMINATIONS**

**2009/2010 ACADEMIC YEAR**

**FOR THE DEGREE OF BACHELOR OF EDUCATION**

**SCIENCE**

**COURSE CODE: CHEM 411**

**COURSE TITLE: ELECTROCHEMISTRY**

**STREAM: SESSION VIII**

**DAY: TUESDAY**

**TIME: 2.00 – 4.00 P.M.**

**DATE: 06/04/2010**

---

**INSTRUCTIONS:**

*Attempt all questions*

**Data  $2.303RT/F = 0.0592$  at  $25^{\circ}\text{C}$ ,  $F = 96500\text{Cmol}^{-1}$ ,  $0^{\circ}\text{C} = 273\text{K}$ ,  $R = 8.314\text{Jmol}^{-1}\text{K}^{-1}$**

**PLEASE TURN OVER**

## QUESTION 1

- a) Define the following
- i) Molar conductivity (1mk)
  - ii) Strong electrolyte (1mk)
  - iii) Reference electrode (1mk)
  - iv) Liquid junction potential (1mk)
- b) The molar conductivity of a strong electrolyte at 25°C was to be 109.9  $\text{Scm}^2\text{mol}^{-1}$  for a concentration of  $6.2 \times 10^{-3} \text{ molL}^{-1}$  and 106.1  $\text{Scm}^2\text{mol}^{-1}$  for a concentration of  $1.5 \times 10^{-2} \text{ molL}^{-1}$ . Estimate the limiting molar conductivity of the electrolyte. (5mks)
- c) i) State Kohlrausch law of independent ionic migration (2mks)
- ii) The specific conductance of a 0.05M solution of ethanoic acid at 25°C is  $4.4 \times 10^{-4} \Omega^{-1}\text{cm}^{-1}$ . The limiting molar conductivities of hydrogen ions and ethanoate ions are 310 and  $77 \Omega^{-1}\text{cm}^2\text{mol}^{-1}$  respectively. Calculate dissociation constant of ethanoic acid. (8mks)

## QUESTION 2

- a) i) Write down an expression for Ostwald's dilution law (2mks)
- ii) The resistances of aqueous acetic acid solution were measured at 25°C in a cell constant of  $0.2063 \text{ cm}^{-1}$ . The following results were obtained.
- |                         |         |         |         |        |         |        |
|-------------------------|---------|---------|---------|--------|---------|--------|
| C (molL <sup>-1</sup> ) | 0.00049 | 0.00099 | 0.00198 | 0.0158 | 0.06323 | 0.2529 |
| R ( $\Omega$ )          | 6146    | 4210    | 2927    | 1004   | 497     | 253    |
- Where C is the concentration of acetic acid and R is the resistance. Plot a graph of  $1/\Lambda_m$  versus  $C\Lambda_m$  and hence determine
- I)  $K_a$
  - II) The degree of ionization of acetic acid at resistance of 2927 $\Omega$ . (13mks)
- b) Given that the limiting molar conductivities of hydrochloric acid, sodium ethanoate and sodium chloride are 0.0426, 0.0091 and  $0.01265 \Omega^{-1}\text{M}^2\text{Mol}^{-1}$  respectively, determine the limiting molar conductivity of ethanoic acid. (3mks)

### QUESTION 3

- a) The emf and the derivative  $(\delta E/\delta T)_P$  of the cell  $\text{Pb}/\text{PbBr}_2(\text{s}), \text{KBr}(\text{aq}), \text{Ag}/\text{Br}(\text{s})/\text{Ag}$  are 0.492V and  $-0.000186\text{VK}^{-1}$  respectively.
- i) Write down the cell reaction for the above cell **(1mk)**
  - ii) Calculate  $\Delta G, \Delta H$  and  $\Delta S$  at  $27^\circ\text{C}$ . **(7mks)**
- b) Briefly outline the principle underlying potentiometric titration and its applications. **(6mks)**

### QUESTION 4

- a) Define the term transport number of an ion **(1mk)**
- b) State three factors that determine motion of an ion in a solution **(3mks)**
- c) Briefly describe how transport number is determined experimentally by Hittorf method. **(3mks)**
- d) The following cell was set up;
- $$\text{Hg}(\text{l})|\text{Hg}_2\text{Cl}_2(\text{s})|\text{NaCl}(0.001\text{M}) : \text{NaCl}(0.01\text{M})|\text{Hg}_2\text{Cl}_2(\text{s})|\text{Hg}(\text{l})$$
- i) Write an equation for all the processes taking place and net cell reaction. **(2mks)**
  - ii) Derive the equation for emf of this cell at  $25^\circ\text{C}$  **(4mks)**
  - iii) Calculate the emf of this cell at  $25^\circ\text{C}$ , if  $t_+$  is 0.4 for NaCl solution and mean activity coefficient is 0.6 and 1 for 0.01 and 0.001M NaCl solution respectively. **(3mks)**
  - iv) Calculate what emf of this cell would be if there were no liquid junction potential. **(2mks)**
  - v) Determine the value of the liquid junction potential **(1mk)**
