## TIME:

9.00-11.00 A.M.

DATE:
11/08/2010

## INSTRUCTIONS:

- Answer Question ONE and any other TWO Questions. Question One carries 30marks while each of the other Two Questions carry 20marks.
- The following constants may be useful
- Acceleration due to gravity $g=9.8 \mathrm{~m} / \mathrm{s}^{2}$
- Universal gravitation constant $G=6.67 \times 10^{-11} \mathrm{NM}^{2} \mathrm{Kg}^{-2}$
- Radius of Earth $R_{e}=6.4 \times 10^{6} \mathrm{~m}$

## PLEASE TURN OVER

## QUESTION 1 (30 marks)

(a) Define the following terms
i). Displacement
ii). Acceleration
iii). Frame of reference
iv). Free body diagram
(b) An object is thrown vertically upwards to a height of 8 m . Find
i). The speed with which it will strike the ground
ii). The time taken to return to its original point of projection
(c) A force of 24 N acts on a 6 Kg mass resting on a smooth surface.
i). What is the acceleration of the mass?
(2mks)
ii). If the force causes the mass to accelerate at $1.5 \mathrm{~m} / \mathrm{s}^{2}$, what would be the frictional force between the mass and the surface
(d) A car of mass 1200 kg traveling at $20 \mathrm{~m} / \mathrm{s}$ increases its speed to $50 \mathrm{~m} / \mathrm{s}^{2}$ in 10 seconds. Calculate
i) The change in momentum of the car
ii) The force acting on the car to make it increase its speed
(e) A man repeatedly sketches a spring of spring constant $240 \mathrm{~N} / \mathrm{m}$ so as to increase the strength of his arms. If each time he stretches the spring by 15 cm and he does so 40 times in one minute, calculate his power.
(f) i) Differentiate between transverse and longitudinal waves
ii) A wave of wavelength 5 cm has a speed of $0.5 \mathrm{~m} / \mathrm{s}$ Calculate the frequency of the source producing the wave
iii) The refractive index for a ray of light traveling from glass to air is 0.67 . If the speed of light in air is $3 \times 10^{8} \mathrm{~m} / \mathrm{s}$, calculate the speed of light in glass.

## QUESTION 2 (20 marks)

(a) State Newton's second law of motion.
(b) The diagram below shows a block of wood of mass 3 Kg attached via a pulley to a hanging weight of mass 4 Kg . Assuming that there is no friction between the block and the bench, calculate
i). The acceleration of the system
ii). The tension on the string

(c) State the law of conservation of linear momentum
(d) A lorry of mass 1500 Kg traveling at $72 \mathrm{Km} / \mathrm{h}$ collides with a stationary smaller car of mass 900 Kg . The impact took 0.4 s before the two moves at a uniform velocity for 10 s . Calculate
i). common velocity
ii). Distance moved after impact
iii). force of impulse
iv). kinetic energy before and after collision, account for energy difference if any
(e) A hunter fired a monkey of mass 100 g hanging on a loose branch. If the mass of the bullet used is 20 g and the speed at which it strikes the monkey is $200 \mathrm{~m} / \mathrm{s}$, calculate the height rose by the monkey after impact assuming that the bullet got embedded in its body and that the weight of the branch can be ignored.
(2mks)

## QUESTION 3 (20 marks)

(a) Define angular velocity and show that it is given by $\varpi=\frac{V}{r}$
(b) State the sources of centripetal force in the following situations
i). orbital and satellite motion
ii). electrons around the nucleus of an atom
(c) A pendulum of mass 400 g is suspended by an inelastic string of length 1 m . The mass is made to rotate in a horizontal circle of radius 0.8 m and whose centre is vertically below the point of support.

## Calculate

i). tension on the string
(3mks)
ii). magnitude of component forces (2mks)
iii). the angular speed
iv). the period of rotation of the mass
(d) A mass is projected at $50 \mathrm{~m} / \mathrm{s}$ at an angle of $30^{\circ}$ to the horizontal. The mass is released 4 m above the ground level. Find
i). maximum height reached by the mass
ii). the speed with which it will strike the ground.

## QUESTION 4 (20 marks)

(a) State Newton's law of universal gravitation
(b) Define gravitational field strength (I) and show that

$$
\begin{equation*}
I=\frac{G M}{r^{2}} \tag{3mks}
\end{equation*}
$$

(c) Show that escape velocity on the Earth surface is given by
$V_{e s c}=\sqrt{2 g R_{e}}$, hence find the approximate escape velocity for a body to leave the Earth surface
(d) i) What is equilibrium?
ii) State two conditions of translational equilibrium
(e) A uniform metre rule is balanced at 10 cm mark by a 2.5 N placed at 0 cm mark. Find the weight of the rule.
(f) A block of mass 0.8 Kg is resting on an inclined plane. When the angle of the slope was increased to $40^{\circ}$, the block starts to slide down
i). determine the coefficient of static friction
ii). when the angle was gradually reduced to $30^{\circ}$ the block slides with a constant speed, determine the coefficient of dynamic friction
iii). Find the acceleration of the block when the angle is $75^{\circ}$

## QUESTION 5 (20 marks)

(a) Define the following as used with waves
i). Frequency
ii). Compression
iii). Rarefaction
iv). Wavelength
(b) State Huygen's Principle and use it to derive Snell's law of refraction
(c) i) State the principle of superposition
ii) State two conditions for interference
(d) Define the following terms as used with waves
i). Doppler Effect
ii). Resonance
(e) i) State two differences between traveling waves and standing waves
ii) A stretched spring of length 50 cm fixed at both ends is made to vibrate and produces a series of harmonic modes of fundamental frequency $f_{0}=200 \mathrm{~Hz}$.
Calculate
i). Frequency of the second and third harmonic
ii). Wavelength of the second and third harmonic
